- German: intermediate

Passionate about business, technology and strongly product-driven, with a particular interest in FinTech and the Sharing & On Demand Economy, I have always knew that I wanted to be part of the world of innovation.

Until last year, I tended to split this world in two different fields: the business on one side, and the technology on the other. Therefore, my plan was to focus only on the business part, by studying Business Administration and specialising in Management.

However, after starting to develop my business last year, I realised that having technical skills was crucial to apprehend an idea as a whole and to be able to deal with the different members of a team. Therefore, I decided to immerse myself in the General Assembly Web Development program. Coding, which was completely new to me at the time, allowed me to gain great problem solving skills and to develop my creativity, while becoming a real passion.

This led me to a first role as Front-End Engineer at Property Partner.

Combining the technical skills I have learned and my love for innovation and business, I am now looking to join a team where I could continue to learn web development while being involved in the business process.

Property Partner

Role: Front-End Engineer

***AngularJS, JavaScript, CSS, HTML,
Google Tag Manager, Google Analytics, Mixpanel***

As a member of the Front-End Team, my role implied mainly working on Property Partner Crowdfunding Website, built with AngularJS, participating to the creation of a Global Stock Exchange for Residential Property.

Moreover, I have been part of the Analytics Integration Process (Event Tracking), through the use of Google Analytics, Google Tag Manager and Mixpanel.

GA

The WDI course from General Assembly is a three month coding bootcamp designed to teach people with a passion for coding the programming fundamentals, but not only this. It also teaches you how to approach a problem, how to develop creative solutions and how to implement them.

In order to be able to adapt to most of the coding environments, we have principally covered the following technologies: **JavaScript, jQery, NodeJS, AngularJs, Ruby, Ruby on Rails, and the use of APIs, and mainly focused on the MEAN Stack**.
In addition, we were taught **TDD** using different testing tools, such as **Mocha, RSpec and Jasmine**. In terms of database, we used **PostgreSQL** and **MongoDB**.
Moreover, the course also emphasis on teamwork through the use of Trello and team workflows on **Github**. We have also developed great team-working skills through daily stand-ups, agile methods, group projects and pair programming.

Personal Projects:

The Dice of Poker
A two players game based on the rules of poker, played with dice.
Keywords: JavaScript
